

`merge.py`: Goes from a dense long format to a sparse irregularly sampled wide format

`impute.py`: Resamples and forward imputes the sparse format to a dense format with the highest resolution, 5min.

`ml_input.py`: On disk pre-processed version for ML models, mainly extracts manual features at a desired resolution

`dl_input.py`: On disk pre-processed version for DL models, mainly one-hot encodes the categorical features and scales the others.
